

# SAMSIC TESTING - HOBOT

At Samsic, we are not slowing down! Our innovation department presents another modern and functional solution from the HOBOT brand, which we had the opportunity to intensively test at our clients' facilities, including: in Romania or Warsaw.

HOBOT was created for independent and autonomous cleaning of glass surfaces. It is an ideal solution for those who want to keep their windows and other glass surfaces spotlessly clean without wasting time.

## OUR EXPERT'S OPINION

“

*Using HOBOT in everyday work allows our employees to perform several tasks at the same time.*

*Its design and autonomy itself arouse great interest also among the facility's users. In addition to the economic and ecological aspects, the robot is ideal for cleaning hard-to-reach places, especially those located very high, which reduces the risk of potentially dangerous incidents related to occupational safety.*

”

**Radosław Pieczonka**  
Integrated Operations Coordinator

## ADVANTAGES OF HOBOT

- It has double ultrasonic nozzles that ensure effective and thorough cleaning.
- It is equipped with the Creative Voice function, which enables communication and voice control of the device.
- Thanks to the automatic spraying system, it uses only 2 ml of distilled water or detergent per 1 m<sup>2</sup> of surface.
- The device can clean up to 26 m<sup>2</sup> on one tank surface.
