

# SAMSIC TESTING - TORK EASYCUBE<sup>®</sup>

Have you ever wondered if there is a solution that would help increase the quality of cleaning services and at the same time improve the level of hygiene by optimizing cleaning efficiency and resources? Tork meets these challenges with its EasyCube<sup>®</sup> solution, now known as Tork Vision Cleaning.

In order to fully test the advantages of this system, we have installed 12 Tork EasyCube sensors at our headquarters in Katowice, which will monitor in real time the frequency of toilet use and, for example, the consumption of soap in dispensers, toilet paper or paper towels by office users and guests. The collected data from the sensors will then be transferred to an application that determines the need to perform a specific service in a certain area.

Thanks to the collected information, we will be able to effectively manage cleaning processes or optimal use of hygiene products.

According to Tork's calculations, we should save about 20% of our cleaning service's time, as well as reduce the number of their inspection rounds by 24%.

Let's find out for ourselves! We will get back to you with the results soon.
